

GoSystem Tax API development roadmap

The GoSystem Tax API allows your firm to save time and effort by automating manual tasks, such as printing, e-filing and collating returns, as well as importing and exporting data into tax returns. After putting hours into each return, put the GoSystem Tax API to work for you.

With the upcoming enhancements, you will be able to do even more. Check out what's currently available and what's coming.

Application area	Feature	Currently available	Enhancement in development
