

## Global Trade Import Management

ONESOURCE™ Global Trade Import Management allows companies to manage the entire import process from the point of shipment to the final submission of the customs declaration.

### The Challenge

Given the global nature of businesses and the constant change in regulatory requirements, companies need to align their import processes to facilitate the flow of information across a global supply chain. This includes ensuring that accurate and timely trade data is submitted upon export and prior to import to facilitate expedited customs clearance and final delivery to your facility.

As supply chains grow in volume and complexity, this process becomes increasingly difficult to manage, especially when executed in a manual fashion.

### The Solution

Global Trade Import Management replaces the manual and time-consuming import process with a robust, on-demand solution designed to facilitate the flow of import/export information across a global supply chain in real time.

By utilizing Global Trade Import Management, companies have reliable means for the exchange of trade data required for the importation of goods into any country around the world. From purchase order to final delivery, our import software presents companies with a complete end-to-end visibility tool, including the ability to facilitate exports electronically out of one country while preparing the import data for importation into another country.

### The Benefits

Global Trade Import Management provides a complete, automated system for consolidating the necessary information for import filing — validating it against regulatory content and providing accurate and timely data to all partners within the supply chain.

Feature	Activity
<b>Customs clearance</b>	Avoid customs clearance delays with validated and compliant import shipment data
<b>Direct filing</b>	Seamlessly connect with customs authorities around the world
<b>ERP integration</b>	Eliminate duplicate data entry by integrating with your ERP systems
<b>Data quality</b>	Reduce the need to re-key commercial information from various sources (invoices, ASN, PO, etc.)
<b>Improved communication</b>	Prepare import and export documentation on one platform and share it across the supply chain, while also tracking and maintaining broker communication
<b>Global trade content</b>	Leverage up-to-date regulatory information from 210+ countries and territories to validate the accuracy of all data before submitting the declaration
<b>Recordkeeping</b>	Hold all import-related documents in one location to ensure recordkeeping regulations are met

### Entry Verification

With ONESOURCE™ Global Trade Entry Verification, you can implement a comprehensive post-entry review process. The software provides importers with an integrated platform designed to compare declaration data and identify errors, correct discrepancies, and communicate issues to the customs broker if needed. The improved visibility into your declaration data will greatly reduce the need for formal corrections to be submitted to customs.

### Importer Security Filing

ONESOURCE™ Global Trade Importer Security Filing (or 10+2) receives and combines the required electronic data elements for filings with little to no keying involved, which results in more accuracy and compliance in ISF filings. You can submit the filing directly to Customs and Border Protection, and upon submission, you will receive status messages throughout the approval process and can quickly see when there is a problem before the shipment arrives at the US port.
